

NutraFeed

Crustacean semi-moist maturation diet

NutraFeed® is a maturation diet for crustacean broodstock. It can be used as a complete replacement of fresh/frozen feeds or as a nutritional booster (species dependent).

The diet is semi-moist (30-35% moist) and manufactured as short pellets at any length and diameter needed. The diet is stable in the water for 24 hours and will not break down when the shrimp or lobster is holding and chewing it.

NutraFeed® diets are solely based on dry meals without any fresh or frozen products. They are pathogen free (certification can be issued for specific batch) with a shelf life of 6 months (refrigerated) or 24 months (frozen).

Herbal extracts (NutraGreen®) are incorporated into the diets. These 100% natural additives aimed at improving broodstock performances including: enhancing egg and larvae quality, sperm motility, vitellogenesis, as well as immune system and digestive system support.

Three different maturation diets are manufactured according to species: NutraFeed® SM for shrimps and prawns, NutraFeed® LM for lobsters and bugs and NutraFeed® CM for crabs.

Typical Analysis (% DW, may vary according to requirements):

Protein	35-38
Lipid	10-14
Ash	6-8
Moist	30-35
DHA	16-20
EPA	9-16
ARA	0.5-2
Total n3	25-35

The diet contains marine organisms meals and oils, vitamins, minerals, immune stimulants, carotenoids, binders, herbal extracts and natural preservatives.

No fresh ingredients are included.
